7 Known Issues

The following issues will be fixed in the next version.

1. It is not available to generate IP soft core using the GAO and IP Core with 32-bit system for the time being;
2. Hierarchy display does not support VHDL design parse. When adding VHDL design, the IDE output window will report error message, but synplifyPro is not affected to use;
ERROR: Hierarchy can not support VHDL;
3. GowinSynthesis does not support VHDL design synthesis. When synthesis contains VHDL design, the IDE output window will report the error message. Please use synplifyPro for synthesis;
Error (EXT3044): Analyze: cannot read format vhd in this product.
Error (EXT0304): Fail to analyze the input design file.
4. Try to reduce the number of capture signals and capture depth if there are any problems with the GAO capturing. If the problem still exists, please contact GOWINSEMI technical support;
5. For DSP rtl design synthesis, the synthesis tool does not support the followings. If the synthesis problem exists, please contact GOWINSEMI technical support;
 - ALU54D does not support ACCLOAD_REG mapping in the asynchronous mode;
 - The MULTALU36X18/MULTADDALU18X18 outputs may not be synthesized into mode 2 when passing through registers.
